TREE MANAGEMENT

Plant Health Care Program

Building your trees' natural defenses.

Welcome to Fallen Leaf Tree Management.

Expert tree service in the heart of Sacramento with your satisfaction guaranteed. One of our Arborists can give you a free comprehensive evaluation on all the trees and shrubs in your landscape and give you a scheduled maintenance plan. Call for free arborist consultation.

About US

Mission Statement

Fallen Leaf Tree Management was started with the intentions of raising the standards and quality of practices within our industry. Every member of the team should have ambitions to progress in knowledge and responsibility. It is vital to the nature of the company that its employees embrace a passion for doing great work and aiding in the education of each and every customer. We take personal responsibility and pride in each tree we plant, prune, fertilize, remove or protect.

Advancing our own skills and setting the example for those around us. We work as a family, play as a team and make every tree we touch better because of it.

Our Founder

Gabe Beeler is the Founder of Fallen Leaf Tree Management. He has dedicated his entire professional life to tree care and the green industry. His passion for his work is directly reflected in the high standards he sets for his company and the impact he has had on the region.

Gabe has been honored as a frequent guest speaker in many conferences such as Recognizing Tree Disease and PAPA meetings. He can be seen on "Ask the Expert" segments for two local television stations and appears periodically on Good Day Sacramento. The Home and Garden cable channel (HGTV) is producing a summer series and has turned to Gabe as a local expert.

PRUNING AND MAINTENANCE

The difference in pruning

To most people, pruning is pruning. Sadly this is not the case. Improper pruning can make pruning necessary on an annual basis, or force the tree to grow faster, weaker and more susceptible to insects and disease. Topping and "lion's tailing" (cutting all interior branches leaving only the smallest of limbs at the very tips) unfortunately are common practices that should never be done. Large pruning cuts should also be avoided unless an imminent hazard is present. Proper pruning is always done out on the ends with cuts 3" and under.

Trust Fallen Leaf Tree Management for proper pruning

Pruning is what we are most proud of. We train our staff to be the best at all applications, whether it is your prized Japanese maple or a native oak that shelters your home. When pruning is done correctly it greatly reduces your tree's chances of failure, lowers its susceptibility to insect and disease and brings out lasting beauty that improves the value of your landscape. Most species of tree will hold a prune for 3-4 years and some as many as 10.

We have crews of all sizes, with certified tree workers on each crew. Tree worker certification is done through the INTERNATIONAL SOCIETY OF ARBORICULTURE, and is the standard of professionalism in the field. Beyond that, we spend an hour of in-house classroom time every week, providing additional training in pruning, hazard recognition, insects and disease. All so that when one of our certified tree workers is in your tree you are GUARANTEED beautiful and less hazardous trees.

All of our certified tree workers are under the supervision of one or more of our CERTIFIED ARBORISTS. This insures that your trees will be pruned within industry standards set by the AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI), along with the BEST MANAGEMENT PRACTICES, set by the INTERNATIONAL SOCIETY OF ARBORISTS.

PLANTING & ESTABLISHMENT

PLANTING & ESTABLISHMENT

At Fallen Leaf Tree Management we are dedicated to planting the right tree in the right place. This means careful selection to insure that the trees we plant are of good stock, an appropriate species for the place to be installed and that the installation is done with care to insure ongoing vitality. Most trees that are planted improperly last an average of 7 years before they fail, 7 years of watering, staking and fertilizing and then it fails and you have to start over. Our certified arborist will insure your tree/shrub has a good start and guaranteed survival.

We use a program which has over 7,000 trees with color pictures and information about fruiting, fall color and a lot more. So you can look at what it is we are suggesting without having to make a trip to the nursery. Once we have selected a tree that is appropriate for the site and of your liking. We will have certified personnel install it, ensuring that the root system is started in the right direction and won't cause problems such as circling or girdling roots.

Nursery trees come in all sizes to fit landscape needs and budgets. The most popular size to install is a 15 gallon, which comes in a black plastic container and depending on species is around 3-8' in height. These trees can be installed for not much more than you would normally pay for the tree alone at a good nursery, including stakes as needed.

If you are looking for a larger tree to begin with we can install "box" trees which come in a range of sizes from 24" to 72" wooden boxes. Whether we carry in a 15 gallon or crane in a 72" box, no job is too small or too big to insure your ongoing happiness and enjoyment of your new tree.
